

# FACTS Utility Programs

**SMF997** – This program aligns/corrects tab orders by tab screen. It displays current tab order on left side of screen, and prompts can be moved to right side of screen in the current tab order. When the user clicks the OK button, the tab order is set to the order in which the fields appear on the right side of the screen.

**SMF996** – This file maintenance is used to enter/edit standard FACTS messages (SMMSGs).

**SMF995** – This file maintenance is used to enter/edit custom FACTS messages (SMCMMSG).

**UTPRCP** – This utility allows you to compare the variables in one SMPRMT record to those of another.

**UTPCOP** – This utility allows you to make a copy of an SMPRMT record. It prompts for the source program, Z\_9\$ value and runtime condition, then asks for destination program, Z\_9\$ and runtime condition.

**UTFMCR** – This is the conversion program that will take an ascii listing of the old style FACTS program and convert it to SMPRMT and SMFMFM records and a beginning program.

**UTSTFM** – This is a program that contains only the bare essential lines of code, along with some instructive remarks for a converted file maintenance.

**UTTPOS** – This program allows you to re-align prompts vertically or horizontally and renumber the edit line number.

**UTRPCR** – This is the conversion program that will take an ascii listing of an old style FACTS report and convert it to SMPRMT and SMRPTS records and a beginning program.

**UTSTRP** – This is a program that contains only the bare essential lines of code, along with some instructive remarks for a converted report.
